

Task

The objective of the task is to take the CSV file supplied by a user (attached CSV), render a line chart with the data submitted by user.

CSV Format

```
SERIES, YEAR | SCORE, YEAR | SCORE . . . . .
```

The first column is name of the series, all other columns in the row contains pipe de-limited data, related to that series. The first param is the year (X-Axis) and second param is the score (Y-Axis).

Tasks

1. Develop a SPA using any frontend framework like VueJS, ReactJS or Angular
2. The Interface should allow user to upload a CSV file (fixed format as attached CSV)
3. All CSV parsing and validation need to be done in browser, and final JSON should be sent to Server

Assumptions

1. Assume that the CSV format is fixed (as attached)
2. Assume that each series is unique and there exists one and only one row with series name
